TOXICOLOGY

Volume contents

Volume 121 (1997)

Toxicology of blast overpressure
N.M. Elsayed (USA) 1–15
The pathology of primary blast overpressure injury
M.A. Mayorga (USA) 17–28
Blast overpressure induced structural and functional changes in the auditory system
J.H. Patterson, Jr., R.P. Hamernik (USA) 29–40
Visual system degeneration induced by blast overpressure
J.M. Petras, R.A. Bauman, N.M. Elsayed (USA) 41–49
Maximal exercise performance-impairing effects of simulated blast overpressure in sheep
A.J. Januszkiewicz, T.G. Mundie, K.T. Dodd (USA) 51–63
Exposure to sublethal blast overpressure reduces the food intake and exercise performance of rats
R.A. Bauman, N. Elsayed, J.M. Petras, J. Widholm (USA) 65–79
A proposed biochemical mechanism involving hemoglobin for blast overpressure-induced injury
N.M. Elsayed, N.V. Gorbunov, V.E. Kagan (USA) 81–90
Biological response to blast overpressure: A summary of modeling
J.H. Stuhmiller (USA) 91–103
Management of primary blast injury
G.J. Argyros (USA) 105–115

Influence of acetaminophen treatment and hydrogen peroxide treatment on the release of a CINC-related protein and TNF-α from rat hepatocyte cultures
There seem to be different releasing mechanisms for different cell types
M. Horbach, E. Gerber, R. Kahl (Germany) 117–126
Role of bile salts in colchicine-induced hepatotoxicity. Implications for hepatocellular integrity and function
Colchicine-induced hepatotoxicity depends upon magnitude and composition of bile salt flux
F.A. Crocenzi, A. Sisti, J. Manuel Pellegrino, M.G. Roma (Argentina) 127–142
Gadolinium chloride reduces cytochrome P450: Relevance to chemical-induced hepatotoxicity
In vitro $GdCl_3$ protects hepatocytes against CCl_3, but not Cd toxicity
D.A. Badger, R.K. Kuester, J.-M. Sauer, I.G. Sipes (USA) 143–153
Suppression of Kupffer cell function prevents cadmium induced hepatocellular necrosis in the male Sprague-Dawley rat
Protection is afforded by i.v. injection of gadolinium chloride
J.-M. Sauer, M.P. Waalkes, S.B. Hooser, R.K. Kuester, C.A. McQueen, I.G. Sipes (USA) 155–164

Immunotoxicology
Diesel exhaust particles and carbon black have adjuvant activity on the local lymph node response and systemic IgE production to ovalbumin
Diesel exhaust particles exert adjuvant effect on the IgE response of Balb/c mice
M. Løvik, A.-K. Høgseth, P.I. Gaarder, R. Hagemann, I. Eide (Norway) 165–178

Book review 179–180

Neither platelet activating factor nor leukotrienes are critical mediators of liver injury after lipopolysaccharide administration
Explanations for the negative findings are discussed.
J.M. Pearson, M.B. Bailie, G.D. Fink, R.A. Roth (USA) 181–189
Maternal and developmental toxicity of polychlorinated diphenyl ethers (PCDEs) in Swiss-Webster mice and Sprague-Dawley rats
Nine congeners were studied in mice and 3 in rats.
K. Rosiak, M.-H. Li, S.J. Degitz, D.W. Skalla, I. Chu, B.M. Francis (USA, Canada, Taiwan) 191–204
Study of the effects of theophylline-related changes in total, free, short- chain acyl and long-chain acyl carnitine concentrations in rat heart
Chronic treatment increases carnitine conjugates.
A.S. Alhomida (Saudi Arabia). 205–213
Tolerance to the hypothermic and hyperthermic effects of chlorpyrifos
Separate neurochemical pathways seem to be involved.
P. Johnson Rowsey, C.J. Gordon (USA). 215–222
Cimetidine enhances the hepatoprotective action of *N*-acetylcysteine in mice treated with toxic doses of paracetamol
Combined use of both agents reduces paracetamol mortality and liver damage.
Z.H. Al-Mustafa, A.K. Al-Ali, F.S. Qaw, Z. Abdul-Cader (Saudi Arabia) 223–228
Glutathione peroxidase and catalase modulate the genotoxicity of arsenite
Both enzymes decrease the oxidative attack by arsenite in X-ray hypersensitive CHO cells
T.S. Wang, Y.F. Shu, Y.C. Liu, K.Y. Jan, H. Huang (Republic of China). 229–237
